NAME:

 $1.\ (10\ \mathrm{points})$ Graph each of the following parabolas.

(a)
$$f(x) = \frac{1}{4}x^2 - \frac{1}{2}x + \frac{9}{4}$$

(b)
$$y = -x^2 + 4x - 5$$

2.	0 points) A experimental aircraft is launched at time $t = 0$. Its height above the ground points	ound
	given by the function	

$$y(t) = -5t^2 + 70t + 15,$$

where y is height (in meters) and t is time (in seconds).

(a) How high is the aircraft at the time it is launched?

(b) How high is it after 4 seconds?

(c) At what time does the aircraft strike the ground?

(d) What is its maximum height?
